

Employee Benefit Plan Audit Issues Training Course

Employee benefit plan (EBP) audits are unique and complicated engagements. Practitioners must ensure they possess the knowledge and expertise to meet the challenges of performing quality audit work. This training course is designed to help practitioners avoid audit deficiencies and enhance their firm's audit quality. Keeping abreast of the latest trends in peer review findings and staying current on the latest audit issues will reinforce the success of your EBP engagements.

Training Course Outline

- The CPEA analyzes recent peer review findings and identifies the most common deficiencies and issues present on EBP audit engagements. Among others, topics covered include:
 - Risk assessment
 - Complementary user entity controls
 - Non-compliance with certain FASB standards (e.g., ASU 2015-12 and ASU 2015-07)
 - Sampling
 - Allocations to participant accounts
- Participants examine real peer review findings (MFCs), learn about the nature of the deficiencies, and gain an understanding of how to avoid them by making sense of the relevant professional literature
- The course features a run-down of challenging issues facing EBP auditors. Issues are identified through first-hand knowledge of conducting and reporting on EBP audits
